

# G2E Las Vegas Preview

G2E 2015  
29 September  
- 1 October

ABBIATI CASINO EQUIPMENT | IL GETTONE BMM TESTLABS TOOLBOX | BOAT DRGT SERVERLESS TECHNOLOGY

## ABBIATI CASINO EQUIPMENT

# Abbiati: Vegas bound with next generation products

Abbiati is heading to G2E with a brand new line of high-quality tables as well a wealth of new chip and plaque design innovations.

**I**talian manufacturer Abbiati Casino Equipment is to showcase a host of new products at G2E 2015 - including its very latest chip: the il Gettone.

Making its US debut at the show will be Abbiati's new line of innovative security technologies, which includes a collection of new patterns, designs and materials for the plaques as well as the new line of patented Tie chips featuring multiple injections, see-thru inserts and a combination of intricate and innovative rim and edge inserts.

All new products are available with security features such as 13.56 MHz RFID, eight-colour UV pigments, 3-in-1 UV security feature, laser tracer technology, optical variable ink and high security holograms.

Also at G2E this year, Abbiati will unveil another new product, the il Gettone, a chip that marries the portability, durability and versatility with the technological sophistication found in higher face value casino plaques.

The raw materials used, the various technologies involved - and over 30 years' experi-

ence in manufacturing security casino currency - has allowed Abbiati to introduce to the market a very high security product against counterfeit.

Abbiati will also launch a new line of tables, dedicated primarily to main rooms and the mass market. The new line is consist-

ent with the group's famous design, style and high quality materials.

"G2E is one of the key shows in the gaming industry and it's essential for our company to be present in this show," said Giorgio Abbiati, CEO of Abbiati Casino Equipment. "It's a perfect place to demonstrate to the visitors our latest developments and new innovative products."

Among its other products, Abbiati will present its GLL-25 certified American Roulette Laser Wheels, which incorporate an upgraded patented invisible laser technology. As the exclusive worldwide distributor of Modiano, Abbiati will also present a complete range of 100 per cent plastic and paperplastic coated playing cards.

Giovanni Abbiati, founder and president of the company, said: "G2E Las Vegas show is a great platform to demonstrate how our products have continued to improve during the years, using new innovative materials, designs and applied technologies."

## DRGT

# Exciting G2E awaits DRGT

**V**isitors will have the opportunity to meet with DRGT's global team at this year's G2E in Las Vegas and discuss the latest innovations from the Belgian systems leader.

DRGT's serverless technology can link all slots in an operator's estate. Each customer has their own special systems requirements, and DRGT tailors its solutions to an exact fit.

Furthermore, Knokke-based DRGT is playing an important role in opening up a new world of marketing opportunities through its systems technology, as operators can

DRGT CEO, Jurgens De Munck, and sales director, Joost van Egeraat

communicate directly with their customers directly through their gaming terminals.

Operators can invite their players to the bar for a drink, offer them a voucher to eat at their restaurant and even congratulate them on their birthday.

"Today DRGT is a truly global systems company and can support globally active operators just as well as local ones," said DRGT CEO, Jurgens De Munck. "The beauty of our systems is that they can be used for all sizes of operations - from small right up to very large operators."

"We tailor our systems to cover the needs for each customer. Our modular technology allows our customers to build their systems when required - being able to add components such as cashless, bonusing, jackpotting and player tracking once these are necessary."

## BMM TESTLABS

# BMM Testlabs ready for a home run

After a year of unprecedented growth, **BMM Testlabs** is ready to welcome G2E delegates to its hometown of Las Vegas, with experts from many of its global offices.

**B**M M Testlabs (BMM) is set to showcase its full range of services and software tools at this year's G2E show. Founded in Australia and now headquartered in Las Vegas, BMM has achieved significant operational milestones over the past 12 months, with the company expanding its test lab capacity in Canada, the US, Austria and Italy.

Martin Storm, president and CEO of BMM, said: "Growth is being driven by global customers who want better returns on their testing investments. They need their products tested better and faster than ever before without an overall reduction in testing quality. This is new value that BMM generates in the market on a continuous improvement basis and it has changed the game in product testing."

Commenting on the news that the US

states Delaware, Kansas, Indiana and Massachusetts recently started to recognise BMM reports, Storm said: "We are very pleased to see US regulators come together to embrace the importance of competition between test labs and the benefits of a multi-lab environment."

BMM offers exclusive software tools such as Toolbox, BOAT and Signatures. Toolbox, BMM's internal project management tool set, has been upgraded to provide greater detail on BMM performance and also to provide details on product quality. This greater detail can assist clients to identify problem areas, resulting in improved compliance and a reduction in resubmissions. BOAT, BMM's online approval portal, has been improved to allow greater control over product approval status to the regulator. BMM Signatures is designed to increase

Martin Storm

calculation times and provide users with a simple and easy interface.

BMM also operates the BMM Academy, providing regulatory training and seminars around the world. Over the last twelve months, BMM has delivered presentations in South America, North America and Europe both in-person and online. BMM also partners with a number of educational institutes in Canada and Macau to provide curriculum for gaming, QA and testing-based courses.
